A Review of Adaptation Policies to Climate Change: Insights from Mahanadi Delta, Odisha

Sumanta Banerjee, Sonnath Hazra, Tuhin Ghosh, R.N. Samal

1 DECCMA (Doctoral Fellow), Chilika Development Authority and Ph.D. Scholar, Ravenshaw University, Cuttack; 2 Post-Doctoral Fellow, Jadavpur University; 3 Joint Director, School of Oceanographic Studies, Jadavpur University; 4 Scientific Officer, Chilika Development Authority

6th DECCMA Consortium Workshop

Introduction
The impacts of climate change are being felt across the globe. Climate change reduces the resilience and increases the human vulnerability. The poor and marginalized sections of the society are more vulnerable to climate variability and change. Thus, those with least resources have least capacity to adapt and are most vulnerable. Thus, it is imperative to understand and review the adaptation strategies.

Objective
To review the existing adaptation policies in the context of climate change.

Indicators of Climate Variability

The maps indicate that coastal Odisha is Vulnerable to multi hazards and this vulnerability impact on overall livelihood and adaptive strategies.

Policy Matrix – Linking policies to Adaptation Pathways

SWOT Analysis

Strength
- Strong Legal framework on Policy Regime
- Extensive Institutional Infrastructure
- Availability of resources under different programmes
- Vulnerability reduction schemes helpful for adaptation
- Eight prioritized national mission operational & active
- National and State Policy
- Conducive for adaptation

Opportunity
- National Flagship programmes help mainstreaming
- Strong Network of Civil society Organizations
- Organized Groups of Grassroots women organizations
- Green Climate Fund and Adaptation Fund

Weakness
- Gender Disaggregated data is not available and in general paucity of data
- No Investment in Policy research.
- Targeted Interventions for children with special needs and non-formal education system
- Interventions are largely supply driven and are not tailored to context specific roles

Threats
- Unsustainable Development without involvement of women
- Not Adequate Mainstreaming DRR activities into core Development agenda

Framework for analysis

- The framework illustrates that outcome vulnerability concepts that concentrate on physical vulnerability (top-down approach) to inform climate change adaptation policy, whereas socio-economic vulnerability follow a bottom up approach (Desai and Hulme, 2004)

Acknowledgements

I would like to thank my research advisor, Dr. Sumanta Banerjee, for her steady support.
