

## **Instructions for Using E-Drone Virtual Reality Files**

1. Download the file for where you want to travel.
2. Transfer the file to your VR headset/phone, usually into a Movies/Videos folder.
3. Open the file on your headset (e.g., using an app like Skybox or DeoVR), or on your phone using a VR Video player.
4. Set the format to 180-degree, side-by-side (exception is the Bloomsbury file, where the format should be set to 360-degree, Mono).
5. On Meta Quest 2 and Quest 3 headsets, the volume should be at 3 points below maximum for the most representative audio experience.
