**eco**  
hair and beauty

# **Sustainable hair care is easy. Just remember: less is more.**

Neither your hair, skin, bills or the planet like too much hot water, heat and product.

## **So you can try:**

**Using tepid water**

**Shampooing less often**

**Turning off the shower/tap when not needed**

**Using less product or easy rinse products**

**Using leave in conditioner  
(or none at all, depending on hair)**

**Experimenting with dry shampoo to  
extend the life of your shampoo**

**Installing an eco-shower head**

## **It all comes down to this:**

Keeping your skin and hair happy can be achieved by using **tepid water** and **less powerful water pressure**. And when you do so you can keep your water and energy bills down!

**This will save you lots of time too!**
